Snake Game Development Report

AI Tool Used

ChatGPT / Codex

Initial Prompt

Create a modern Snake Game with smooth controls, scoring system, and responsive design.

First Result

The AI generated a basic Snake Game with movement, food collection, and scoring.

Prompt Improvements

I improved the prompts by asking for:

- Better visuals
- More features
- Coins and rewards
- Achievements
- Pets
- Rebirth system
- Better user interface

What Worked Well

- Clear instructions
- Step-by-step feature requests

- Iterative improvements
- Testing after each change

What Did Not Work Well

Some generated versions contained bugs and deployment issues. Certain features required multiple prompt refinements before working correctly.

Challenges Faced

- Deployment problems
- Missing files during upload
- Feature integration issues
- Category and UI bugs

Solutions

- Updated project files
- Refined prompts
- Tested repeatedly
- Used GitHub for deployment

Final Result

The final Snake Game includes improved visuals, scoring, rewards, achievements, and a more polished user experience. The project demonstrated how prompt engineering can be used to build and improve software applications.

Key Learning

I learned that better prompts produce better results. Iterative prompting and testing helped improve the final game significantly.
